Attica

dweller can seldom appreciate. Many a villager may curse the land or bless it, as the seafarer does the sea, but he does it as though he were speaking of a part of his own body. In this he resembles his forebears of three thousand years ago. Legally, however, land ownership in Greece has gone a full cycle in the past three millenniums.[8]

A good vantage point from which to view this cycle of land ownership is Attica, the area around Athens. The average tourist to Greece speeds down the road from Athens on his way through the Attic countryside to Sounion, where Poseidon's temple overlooks the sea; or he drives a few miles north to Marathon to climb the memorial mound; he moves through Attica for forty or fifty miles on his way to Megara and Corinth, ancient places to be seen and photographed. On all of these trips he will see peasants everywhere. In the spring and summer they are bringing loads of vegetables — carrots, tomatoes, squash — into the city; in the fall they are taking grapes from the vineyards to be pressed by foot in the large wooden vats or, as winter comes, carrying the dead branches of the vines home to burn in their small, cold houses. Their slow-moving animals delay the tourist bus, their sheep respond erratically to the auto horn, but the peasants themselves seem unconcerned about the traffic. And the land, the dusty countryside, dotted with the gray-green olive groves, and the dark points of the cypress, surrounded by heights incredibly changing from silver to rose to violet and purple in the dusk, must look very much the same as it did when travelers or Athenians described it long ago.

In the sixth century B.C. most of the soil of Attica was in the hands of individual proprietors. It was "cultivated, as far as it was cultivable at all, by peasant proprietors, who appear to have been, if not prosperous, at least independent and contented until the devastation of Attica in the Peloponnesian War brought with it widespread unsettlement and ruin and inaugurated a period of hardship and struggle for the rural population."[9] Today peasant proprietors again work their own land, independent and moderately content, on the Attic plain and up the rocky slopes where crops, vineyards or olive trees can be made to grow.

The story of what happened between the Golden Age's peasant proprietors and the return of the land to peasant owners in the Atomic Age not only reveals much about the past of Greece but helps explain the contemporary peasant's concern for land.[8] The individual property holder, sometimes medium and sometimes small, persisted, although with difficulty, from classic times down to the Byzantine period. Then some villages, called *kephalochoria,* did manage even under Byzantium to preserve the private peasant holdings, and many more settlements possessed communal property to serve the needs of the commune. But most of the individual holdings yielded to the large estate which belonged to the crown, the nobles, or the clergy.[8] After the end of Byzantium in 1453, the Turkish

Religious Holidays and Namedays

Family members, however, do not have to wait for the coming of an annual festival or fair to find an occasion for dancing or taking things easy. There are many other religious holidays calling for special observances in addition to Easter, the most important, and the Twelve Days surrounding Christmas. For example, Greek civil servants observe, with pay, approximately twenty-five holidays throughout the year, and industrial workers honor about half this number, some of them with pay. The villager, closer to the traditions for which the holidays stand, will celebrate the full twenty-five and others added for good measure.

To trace all of these holidays would call for a detailed Calendar of Customs, a list far too lengthy to be incorporated here even if one had mastered through the years the many regional variations throughout Greece.[6] What is more important is the realization that holidays do play an important part in adding rhythm and color to family and community life, as well as indicating to the farmer, whose agricultural work cycle is closely meshed with the regularly recurring holidays, that it is time for him to take up or finish some important activity.

I tend to associate each of the major Greek holidays with the particular village or city I happened to be in at the time of its observance. On one May Day, for example, I was in the heart of the Peloponnesos where groups of school children with their teachers were taking walks through the fields, an excursion-picnic. And, then, in the early afternoon to be invited to participate in the festivities at the school proved pleasant indeed. An important part of the activities was the hanging of the wreath over the door of the school, a pagan custom supposed to drive away evil.

Near Phlorina, in 1953 and again in Athens in 1955, I observed the commemoration of the holiday in honor of St. John the Baptist on June 24. This pagan midsummer festival has survived on into the present so much so that even in Athens, to say nothing of the villages, on St. John's Eve small boys light fires in the yards or streets and jump over them. One is supposed to burn all worthless things as a symbol of purification of the house and, as token of personal purification, one jumps over the fire while shouting "I leave my sins and my fleas behind me."[7] Into the same fire the peasants throw the withered May Day wreaths. This too is the evening when the girls of the village seek to learn their fortunes from the "dumb" or speechless water which a maiden or, in some places a young boy, brings from the fountain while remaining absolutely quiet despite the efforts of the bystanders to make the bearer talk. Later, each girl drops some easily identified possession into the jar which is "locked" until the next evening, thereby giving the name of *kledona* (from *kledi*, key) to this particular custom. When it is unlocked, the girls sing songs which foretell

The second, third, and fourth of January are ordinary working days, but on January 5 people expect a half-day off since it is Epiphany Eve, at which time children also sing the kalenda about the baptism of "the child of God." There is a five o'clock service in the morning at which occurs the first blessing of the waters. Those in attendance have brought jugs or cups for the blessed water which they take home to use in curing the sick or preventing the Evil Eye during the year. But on Epiphany itself occurs the most spectacular second blessing of the water, done in front of everybody at the church or near some body of water into which the cross is thrown. Swimmers are ready to dive in after it and struggle for its possession. The one who succeeds in gaining it is not only assured of good luck during the year but he can pass throughout the crowd and even the community to collect money from those solicited.

527 533 788 755 777

On Epiphany the priest visits the homes of the parish to bless each room by sprinkling holy water there, thus guaranteeing that all kallikantzari[1] have been exorcised and chased back to their lairs beneath the earth until the next Twelve Days comes around.

789

Easter brings with it a wealth of customs, a blend of the pagan and the Christian, which are lightened by the coming of spring and the renewal of nature. Although they are "all of a piece" in the peasant mind, they can be best understood by the outsider in terms of Carnival, Lent, and Holy Week.

Carnival begins nine weeks before Easter and runs for three weeks. The second week is climaxed by Meat Sunday and the third week by Cheese Sunday. This is the time for weddings which otherwise could not take place until after Easter; this is the time for masquerades, although these are less pronounced in the villages than in the cities; this is also the time when family groups get together for little feasts before the Great Fast starts forty days before Easter. The last two Saturdays of Carnival and the first Saturday of Lent are *psychosabbata,* or memorial days for the dead. On the Thursday of the middle week of Carnival, members of the family, bringing their own food with them, gather in the home of the eldest relative to have a special meal, and on this occasion they allow some dish to scorch on the stove and smell up the house in the belief that this will bring good luck. This day is called *tsichnopempti,* since *tsichna* stands for the odor of burning flesh.

585 369 785 769 777

Meat Sunday is the eighth one before Easter (the villagers count Easter as one of the Sundays). On this day the people are supposed to start doing without meat products for the Lenten period. On the following Sunday, called Cheese Sunday, the forbidden foods are broadened to include milk products as well. This latter holiday is especially colorful in many parts of Greece, for on this day the village boys prepare piles of wood on various heights to be lit after dark. This is also the day for visiting older relatives

476 branches) from the hillsides to the house. But the most frequently described and the most romantic arrangements are the *nychteria,* or the groups of 573 women who work together in the evening:

> In the nychteria women help each other finish lighter types of work such as carding, the breaking and cleaning of almonds, cornhusking, kneading of ring [562] biscuits, and the like. In these nocturnal pursuits in certain places customs are [574] strict and men are strictly forbidden to participate. Because this type of work [535] is housework and is carried out in the late hours of the day, it usually takes the form of a social gathering. Drinks and roasted chickpeas are offered, jokes [533] are told, games are played, stories and anecdotes are told, and there is singing and dancing.[1]

[372] Once in a while this dancing may last until dawn. In the summertime, especially, the women gather in the village lanes and spin by the light of the moon or a torch of resinous wood.

476 When a woman, whose husband is dead or off in the army, needs help which no kinship group can provide, she will go to the head of some other [589] family and say: "My son has gone into the army. I have only daughters. If you will help me in man's work my daughters will help you." They then become *kollegoi* (colleagues or partners) and carry out the agreed-upon obligations.

These examples are not intended to cover the wide range of mutual-aid [226] activities, but they serve to highlight their main features. Fishermen have [241] numerous arrangements for helping one another; farmers may rent a field [422] and work it jointly, or even own olive or nut trees in common. In general, these mutual-aid arrangements are viewed as quite different from landlord-tenant contracts which occurred in many forms before the land redistribution in the 1920s. Those tied together in mutual-aid agreements think of themselves as coequal and not as superior and subordinate partners. Nor do these mutual-aid traditions ordinarily apply to cases where money alone is given as full payment for services received. Instead, they make it possible for villagers to meet many of their important needs without having to pay money for services rendered. The mutual-aid practices discussed here differ also from what might be called philanthropy or deeds done for "the good of the soul" which will be looked at more closely in connection with the villager's religion.

[157] Beyond any question, there is a strong strain of cooperation even among the individualistic Greeks. Although somewhat overidealized, the following comment by T. K. Papaspyropoulos about his Peloponnesian village portrays the essence of mutual aid there:

> When somebody gets sick everybody goes to visit him and look after him. When a young girl gets married all the village goes and helps. When they sow, plow, winnow, or do any other village tasks one person helps the other.

Vasilika

parents have carefully prepared for them, is a form of pleasure so well recognized that there is a specific verb to express it: *kamarono*.

The economic activities of the family through which its members actually carry out a large part of their obligations are usually conducted by an entire household. A household in Vasilika, however, is neither limited to nor does it always include a husband and wife and their children, that is, a family. This is a result of the operation of the marriage, dowry, and inheritance system in the region (to be discussed fully in Chapter 4), and of unpredictable specific circumstances. Here it is sufficient to say that in 1961, of Vasilika's fifty-one households, twenty-six were composed of the elementary family; eight, in addition to the parents and their children, included the widowed mother of the husband; seven had a husband and a wife living alone; and three included one married son and his wife and children living in the same house with his father and mother and unmarried brothers and sisters. Of the remaining seven households, each had its own unique composition because of recent deaths in the family or other special circumstances. Whatever the particular situation, however, no Vasilika household includes anyone who is not a kinsman, nor indeed any adults outside the kinship range of parents, their grown children, or adult brothers and sisters.

Of the fifty-one households in Vasilika, thirty-five are headed by farmers who own some land. Although, for various reasons, these farmers are not all equally dependent on their land holdings for their total subsistence and income, their round of life as independent working farmers is one important expression of the aims and obligations of their families. The yearly round of agricultural activities is devoted principally to the production of grapes for wine, wheat for bread, and cotton and tobacco for cash. The farming households also engage in subsidiary activities which contribute to the production and processing of the main crops, and which add to the food supply and income of the households.

Major Crops

The first event of the agricultural year is the pruning of the grape vines. Since grapes are not a commercial crop, each farmer devotes only one or two *stremata* (four *stremata* equal one acre) to viticulture. Wine is made and consumed at home, and each farmer aims to produce only enough grapes to keep him in wine for a year. Pruning of the grape vines starts after the winter rains have abated and the early spring sun appears. Only two or three "eyes" are left on a vine, and the cuttings are carried back to the storehouses to be saved for use as fuel for spit-barbecuing the Easter lambs. Again, as we have seen, farmers are particularly conscious of fatigue in the course of the three or four days it usually takes to do the pruning. Palms have softened over the winter, the wooden handle of the pruning hook raises blisters, and the unaccustomed stooping and pulling motions cause backaches. After the pruning, deep hoeing is done to pile the earth around the short, stout vines. The work is done with a long-handled heavy hoe and, in Vasilika, is considered man's work, as is the pruning. Since the two

THE WATERS OF MARAH

Autres temps, autres moeurs. "Unhappily", said Father Callinicos, as we waited at the foot of the precipice and Gregorios unsaddled the pony, "there have been regrettable changes; formerly there was great security." The windlass, it appeared, was now used only for hauling up firewood and victuals. We took a last look at the leeks, now 100 feet above our heads, and entered the dark passage which gives access to the steps leading to the monastery. Agathangellos was awaiting us outside the now disused refectory: a youngish monk, clad in a tattered grey cassock and soft cap, who had come to the Meteora, we subsequently discovered, in 1939. He carried us off to the guest-chamber (little used in these days) and left us among the faded memorials of former splendour while he went in search of refreshment. A few minutes later the insistent clamour of the *semandron* summoned us to vespers in the fine *catholicon*, dating from the middle of the sixteenth century, where Athanasius the Athonite, clad in the habit of a western monk, looks down from the apse—a fragment of an earlier church on the same site, built by Ioasaph in 1388. A frugal supper of vegetables, goats' milk cheese and bread followed, and afterwards we sat on wooden stools round a fire of brushwood and talked to the *Igoumenos* and the other members of his little family, while Agathangellos busied himself in the kitchens, where cats as lean as the stylite saints depicted in the frescoes of the narthex lurked in the shadows. Father Callinicos, we discovered, had been at the Great Meteoron for nearly forty years. There was one other priest in the community: a Father Theophylaktos who had lived in the Athonite house of Xeropotamou for several years as a simple monk before he was ordained and came to Thessaly in 1935. Another monk—also named Callinicos—had been carried off by the Italians and had died in exile. Apart from Father Agathangellos, the only remaining member of the community was a very ancient personage named Paul who appeared to lead the life of a solitary, and whom we but dimly discerned amidst the shadows of the church. Gregorios, who had accompanied us from Kalambaka, was no monk but a married man with a wife and several children, lately returned to their village in the mountains to the west of Trikkala. We encountered him again some ten days later, breasting a snow-covered ridge among the foothills of Pindos with a couple of heavily-laden pack-animals, and accompanied by a little troop of refugees on their way home after three years in Kalambaka.

Shortly after eight o'clock Father Agathangellos reappeared with a

/59 cont./ 241
that are shallow, that is where the top soil is 5 to 7 inches, the iron plow cannot work so successfully as the wooden plow. It goes too deep and brings up the raw infertile soil which destroys the field for many years. The wooden plow does not turn the furrow over but leaves it in the place, thus the field is plowed without bringing to the surface the subsoil. The farmers think the iron plow poisons the soils of this kind and never use an iron plow on such soils but only a wooden one. The fields for wheat seed are plowed from 3 to 7 times before seeding. It has been a custom to plow the same field as many times as possible. The common expression is: "The more you work the soil the more you get." This is of course a general principle and does not hold true under all conditions. [407] 241 242

Manure is seldom applied since almost all of it is used as fuel. Each farmer on the average has 4 animals and they are in pasture all day the year around. What little manure he gets he uses for fuel. 241 237 372.

Chemical fertilizers are too expensive and the farmer is not acquainted with them. He still talks about them as "fine soil filled in sack and colored with lime."

They understand well the importance of manure but /60/ cannot afford to use it for their fields. One of the outstanding problems which is that of a fuel to substitute for dried manure should be attacked first before trying to do anything with farming. The productivity of the land is decreasing year after year. The humus, what little there is, is depleted and the fields need it in order to continue cultivating them. In one survey, I found out that 92% of the manure is used as fuel and only 8% is applied to the fields. This study also revealed that by applying the manure to the field the increased production buys 2 1/2 times as much fuel of lignite coal. After proving to them the importance of the manure they were convinced of the profit in buying lignite coal, but a special stove so constructed as to fulfil the needs of a farm family was not discovered. [433] [433] [354]
